Lot-specific information

Olerup SSP® DQB1*06:02,DQA1*01:02

Product number:	101.901-24 – including <i>Taq</i> polymerase
	101.901-24u – without <i>Taq</i> polymerase
Lot number:	4G6
Expiry date:	2021-01-01
Number of tests:	24
Number of wells per test:	7+1
Storage - pre-aliquoted primers:	dark at -20°C
- PCR Master Mix:	-20°C
- Adhesive PCR seals	RT
- Product Insert	RT

This Product Description is only valid for Lot No. 4G6.

Complete product documentation consists of generic Instructions for Use (IFU), lot specific Product Insert, Worksheet and Certificate.

CHANGES COMPARED TO THE PREVIOUS OLERUP SSP® DQB1*06:02,DQA1*01:02 Lot (1E7)

The DQB1*06:02,DQA1*01:02 kit has been redesigned and improved with regards to allelic detection and discrimination and facilitated interpretation. The kit resolution focuses on common and well documented (CWD) alleles¹.

This lot contains 7 primer mixes for the DQA1, DQB1 and DRB1 alleles and includes a negative control.

The primer set, specificity and interpretation tables have been updated for the DQB1 and DQA1 alleles described since the previous *Olerup SSP®* DQB1*06:02,DQA1*01:02 lot (**Lot No. 1E7**) was made. The kit design is based on IMGT/HLA database 3.31.0.

Lot No.: 4G6

Lot-specific information

Well 8 contains Negative Control primer pairs, that will amplify more than 95% of the Olerup SSP® HLA Class I, DRB, DQB1, DPB1 and DQA1 amplicons as well as all the amplicons generated by the control primer pairs matching the human growth hormone gene.

HLA-specific PCR product sizes range from 75 to 200 base pairs.
 The PCR product generated by the positive control primer pair is 430 base pairs.

¹The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon, matching the specificity-determining 3'-end of the primer is given. Nucleotide and codonnumbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

²The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon or the 2nd intron, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

Lot-specific information

PRODUCT DESCRIPTION

DQB1*06:02,DQA1*01:02 - SSP

CONTENT

The primer set contains 5'- and 3'-primers for identifying the following on CWD level^{1,2}:

DQB1*06:02 DQA1*01:02 DRB1*15:xx

DQB1*06:02 DQA1*01:02

DQB1*06:02 DRB1*15:xx

DQB1*06:02

DQA1*01:02

DRB1*15:xx

¹Mahlios J et al.

The autoimmune basis of narcolepsy.

Current Opinion in Neurobiology 2013, 23:767–773

²Mignot E et al.

HLA DQB1*0602 is associated with cataplexy in 509 narcoleptic patients.

Sleep 1997, 20:1012-1020.

Please note that DQB1 amplifications usually are somewhat less pronounced than e.g. DRB and DQA1 amplifications even when using the same DNA preparation and exactly the same experimental procedures.

Positive and negative control DNAs are included in the kit:

DNA 1; positive control DNA **IHW 9013, SCHU**. (The positive control DNA will be positive for the alleles DQA1*01:02, DQB1*06:02)

DNA 2; negative control DNA, **IHW 9065, HHKB**, DQA1*01:03, DQB1*06:03.

(A DQA1*01:03, DQB1*06:03-positive DNA was chosen as negative control, as this is most similar to the DQA1*01:02, DQB1*06:02 group of alleles in the primer matching regions.)

The kit contains enough control DNAs to perform 1 test set up of positive and negative control. If more than 1 test set up per kit are run other positive and negative DNA samples can be used as controls (e.g. positive and negative samples from previous tests).

Legal notice: The DNA in this kit is included under licensing agreement between Olerup SSP AB and Public Health England.

101.901-24 – including *Taq* polymerase, IFU-01
 101.901-24u – without *Taq* polymerase, IFU-02

Lot No.: 4G6

Lot-specific information

PLATE LAYOUT

Each test consists of 8 PCR reactions in a 8 well PCR plate

1	2	3	4	5	6	7	8
DQA1	DQA1	DQA1	DQA1	DQB1	DQB1	DRB1	NC

The 8 well PCR plate is marked with '4G6' in silver/gray ink.

Well No. 1 is marked with the Lot No. '4G6'.

Wells 1 to 4 – DQA1 high resolution primers.

Wells 5 to 6 – DQB1 high resolution primers.

Well 7 – DRB1 low resolution primers.

Well 8 – Negative Control (NC).

A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.

The PCR plates are covered with a PCR-compatible foil.

Please note: When removing each 8 well PCR plate, make sure that the remaining plates stay covered. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

UNIQUELY IDENTIFIED ALLELES

DQA1, DQB1 and DRB1 alleles recognized by the HLA Nomenclature Committee in January 2018^{1,2} have been considered in the specificity and interpretation tables of the DQB1*06:02,DQA1*01:02 kit.

For further details see Content section.

¹DQA1, DQB1 and DRB1 alleles listed on the IMGT/HLA web page 2018-January-19, release 3.31.0, www.ebi.ac.uk/imgt/hla.

²Alleles that have been deleted from or renamed in the official WHO HLA Nomenclature up to and including the last IMGT/HLA database release can be retrieved from web page <http://hla.alleles.org/alleles/deleted.html>.

EXPECTED RESULTS

Table 1 describes expected results for the (groups of) alleles that the kit is able to detect and separate.

Table 1: Expected results for targeted DQA1, DQB1 and DRB1 alleles.

DQA1 alleles	DQB1 alleles	DRB1 alleles	Positive DQA1 wells	Positive DQB1 wells ¹	Positive DRB1 wells
*01:02	*06:02	*15:xx	2, 3	5	7
	*06:02	*15:xx		5	7
*01:02	*06:02		2, 3	5	
*01:02		*15:xx	2, 3		7
		*06:02		5	
*01:02			2, 3		
		*15:xx			7

¹The DQB1*06:02:05 allele is also amplified in well 6.

101.901-24 – including *Taq* polymerase, IFU-01
101.901-24u – without *Taq* polymerase, IFU-02

Visit www.olerup.com for
“Instructions for Use” (IFU)

Lot No.: 4G6

Lot-specific information

In the negative control well no PCR product should be seen. The presence of PCR product(s) indicates contamination. Primer oligomer artifacts, approximately 40 to 50 bp in size, may be seen. This does not represent contamination.

101.901-24 – including *Taq* polymerase, IFU-01
 101.901-24u – without *Taq* polymerase, IFU-02

8 ⁶	-	-	Negative Control

¹Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of SSP typings.

When the primers in a primer mix can give rise to HLA-specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits, the alleles listed are specified according to amplicon length.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

**101.901-24 – including Taq polymerase, IFU-01
101.901-24u – without Taq polymerase, IFU-02**

Visit www.olerup.com for
“Instructions for Use” (IFU)

Lot No.: 4G6

Lot-specific information

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

²The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 430 or 515 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the longer, 515 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases.

³For several DQA1, DQB1 and DRB1 alleles 1st and/or 3rd exon(s) and beyond, as well as intron nucleotide sequences, are not available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. Assumption is made that unknown sequences in these regions are conserved within allelic groups.

⁴Primer mixes 1, 3 and 4 may give rise to a lower yield of HLA-specific PCR product than the other DQB1*06:02,DQA1*01:02 primer mixes.

⁵Primer mix 7 has a tendency to giving rise to primer oligomer formation.

⁶Primer mix 8 contains a negative control, which will amplify more than 95% of HLA amplicons as well as the amplicons generated by the control primer pairs matching the human growth hormone gene. HLA-specific PCR product sizes range from 75 to 200 base pairs and the PCR product generated by the HGH positive control primer pair is 430 base pairs.

Lot No.: 4G6

Lot-specific information

¹The provided cell line HLA specificities are retrieved from the <http://www.ihwg.org/hla> web site. The specificity of an individual cell line may thus be subject to change.

²The specificity of each primer solution in the kit has been tested against 48 well characterized cell line DNAs and where applicable, additional cell line DNAs.

In primer solutions 5 and 7 one or more 3'-primers were not possible to test, and in primer solution 7 three 5'-primers were not possible to test.

Additional 3'-primers in primer mix 7 were tested by separately adding one 5'-primer.

101.901-24 – including *Taq* polymerase, IFU-01
101.901-24u – without *Taq* polymerase, IFU-02
