## Olerup SSP® DRB1\*10

Product number: 101.129-06 – including *Taq* polymerase

Lot number: 81F

Expiry date: 2011-April-01

Number of tests: 6 Number of wells per test: 4

Storage - pre-aliquoted primers: dark at -20°C

PCR Master Mix: -20°C
 Adhesive PCR seals
 Product Insert

This Product Description is only valid for Lot No. 81F.

# CHANGES COMPARED TO THE PREVIOUS OLERUP SSP® DRB1\*10 LOT

The DRB1\*10 specificity and interpretation tables have been updated for the DRB1 alleles described since the previous *Olerup* SSP® DRB1\*10 lot was made (Lot No. 84E).

One well have been added to the DRB1\*10 kit, well **4**.

The primers of the wells detailed below have been exchanged, added or modified compared to the previous lot.

Well	5'-primer	3'-primer	rationale
4	New	New	New primer pair for the DRB1*1003 allele.

101.129-06- including Taq polymerase

## PRODUCT DESCRIPTION

## DRB1\*10 SSP subtyping

#### CONTENT

The primer set contains 5'- and 3'-primers for identifying the DRB1\*1001 to DRB1\*1003 alleles.

#### PLATE LAYOUT

Each test consists of 4 PCR reactions in an 8 well PCR plate. Wells 5 to 8 are empty.

1 2 3 4 empty empty empty empty

The 8 well PCR plate is marked with 'DR10' in silver/gray ink.

Well No. 1 is marked with the Lot No. '81F'.

The PCR plates are covered with a PCR-compatible foil.

**Please note:** When removing each 8 well PCR plate, make sure that the remaining plates stay covered. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

#### INTERPRETATION

Only the DRB1\*10 alleles will be amplified by the DRB1\*10 subtyping kit. Thus, the interpretation of DRB1\*10 subtypings is not influenced by other groups of DRB1 alleles or other DRB genes.

#### UNIQUELY IDENTIFIED ALLELES

All the DRB1\*10 alleles, i.e. **DRB1\*1001 to DRB1\*1003**, recognized by the HLA Nomenclature Committee in April 2009<sup>1</sup> will give rise to unique amplification patterns by the primers in the DRB1\*10 subtyping kit.

The DRB1\*10 SSP subtyping kit cannot separate the DRB1\*100101 to DRB1\*100103 alleles.

<sup>1</sup>DRB1 alleles listed on the IMGT/HLA web page 2009-April-17, release 2.25.0, www.ebi.ac.uk/imgt/hla.

#### RESOLUTION IN HOMO- AND HETEROZYGOTES

The 3 DRB1\*10 alleles can be combined in 6 homozygous and heterozygous combinations. Two of these genotypes do not give rise to unique amplification patterns.

++-+ 1001,1003 = 1003,1003

1001 = 100101 - 100103

## SPECIFICITY TABLE

## DRB1\*10 SSP subtyping

Specificities and sizes of the PCR products of the 4 primer mixes used for DRB1\*10 SSP subtyping

Primer Mix	Size of spec. PCR product <sup>1</sup>	Size of control band <sup>2</sup>	Amplified DRB1*10 alleles
1	210 bp	515 bp	100101-1003
2	205 bp	515 bp	100101-100103, 1003
3	205 bp	430 bp	1002
<b>4</b> <sup>3</sup>	70 bp	430 bp	1003

<sup>1</sup>Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of DRB1\*10 SSP subtypings.

When the primers in a primer mix can give rise to specific PCR products of more than one length this is indicated if the size difference is 20 base pairs or more. Size differences shorter than 20 base pairs are not given. For high resolution SSP kits the respective lengths of the specific PCR product(s) of the alleles amplified by these primer mixes are given.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

<sup>2</sup>The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 430 base pairs, for most wells, or a band of 515 base pairs, for some wells.

Wells number 1 and 2 contain the primer pair giving rise to the longer, 515 bp, internal positive control band in order to help in the correct orientation of the DRB1\*10 subtyping and in order to allow kit identification.

In the presence of a specific amplification the intensity of the control band often decreases.

<sup>3</sup>Specific PCR fragments shorter than 125 base pairs have a lower intensity and are less sharp than longer PCR bands.

## **CERTIFICATE OF ANALYSIS**

Olerup SSP® DRB1\*10 SSP

**Product number:** 101.129-06 – including Taq polymerase

Lot number: 81F

2011-April-01 **Expiry date:** 

Number of tests: 6 Number of wells per test: 4

#### Well specifications:

Well No.	Production No.
1	2007-389-01
2	2007-389-02
3	2007-389-03
4	2009-589-04

The specificity of each primer solution of the kit has been tested against 48 well characterized IHWC cell line DNAs.

No DNAs carrying the allele to be amplified by primer solution 3 and 4 were available. The specificities of the primers in primer solution 3 and 4 were tested by separately adding one additional 5'-primer, respectively one additional 3'primer.

Results: No false positive or false negative amplifications were obtained.

Date of approval: 2009-May-25

Approved by:

**Quality Control, Supervisor**
