

Lot No.: 36F

Lot-specific information

**Olerup SSP® DRB5**

Product number:	101.123-24u/06u – without <i>Taq</i> pol.
Lot number:	36F
Expiry date:	2010-November-01
Number of tests:	24 test – Product No. 101.123-24u 6 tests – Product No. 101.123-06u
Number of wells per test:	16
Storage - pre-aliquoted primers:	dark at -20°C
- PCR Master Mix:	-20°C
- Adhesive PCR seals	RT
- Product Insert	RT

**This Product Description is only valid for Lot No. 36F.****CHANGES COMPARED TO THE PREVIOUS OLERUP SSP® DRB5 LOT**

The DRB5 specificity and interpretation tables have been updated for the HLA-DRB alleles described since the previous *Olerup SSP® DRB5* lot was made (**Lot No. 28E**).

The primers of the wells detailed below have been exchanged, added or modified compared to the previous lot.

Well	5'-primer	3'-primer	rationale
6	Modified	-	Modified 5'-primer to decrease primer dimer formation.

Lot No.: 36F

Lot-specific information

## PRODUCT DESCRIPTION

### DRB5 SSP subtyping

#### CONTENT

The primer set contains 5'- and 3'-primers for identifying the DRB5\*0101 to DRB5\*0113 and the DRB5\*0202 to DRB5\*0205 alleles.

#### PLATE LAYOUT

Each test consists of 16 PCR reactions in a 16 well cut PCR plate.

1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16

The 16 well cut PCR plate is marked with 'DRB5' in silver/gray ink.

Well No. 1 is marked with the Lot No. '36F'.

The PCR plates are covered with a PCR-compatible foil.

**Please note:** When removing each 16 well PCR plate, make sure that the remaining plates stay covered. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

#### INTERPRETATION

Only alleles of the DRB5 locus will be amplified by the DRB5 subtyping kit, except that the DRB1\*0907 allele will be amplified by primer mixes 1, 2, 3 and 15.

#### UNIQUELY IDENTIFIED ALLELES

All the DRB5 alleles, i.e. **DRB5\*0101 to DRB5\*0113 and DRB5\*0202 to DRB5\*0205**, recognized by the HLA Nomenclature Committee in October 2008<sup>1</sup> will give rise to unique amplification patterns by the primers in the DRB5 subtyping kit<sup>2</sup>.

<sup>1</sup>DRB5 alleles listed on the IMGT/HLA web page 2008-October-10, release 2.23.0, [www.ebi.ac.uk/imgt/hla](http://www.ebi.ac.uk/imgt/hla).

<sup>2</sup>The DRB5\*0112 and DRB1\*0907 alleles will give rise to identical amplification patterns. These two alleles can be distinguished by e.g. the DR low resolution primer set.

**Lot No.: 36F****Lot-specific information****RESOLUTION IN HOMO- AND HETEROZYGOTES**

The 17 phenotypically different DRB5 alleles generate 18 amplification patterns, that can be combined in 171 homozygous and heterozygous combinations. Sixty-three of these genotypes do not give rise to unique amplification patterns.

16 <sup>6</sup>	140 bp	430 bp	0205	

**Lot No.: 36F****Lot-specific information**

<sup>1</sup> Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of DRB5 SSP subtypings.

When the primers in a primer mix can give rise to specific PCR products of more than one length this is indicated if the size difference is 20 base pairs or more. Size differences shorter than 20 base pairs are not given. For high resolution SSP kits the respective length of the specific PCR product(s) of the alleles amplified by these primer mixes are given.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

<sup>2</sup>The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 430 base pairs, for most wells, or a band of 515 base pairs, for some wells.

Well number 1 contains the primer pair giving rise to the longer, 515 bp, internal positive control band in order to help in the correct orientation of the DRB5 subtyping.

In addition, wells number 2, 5 and 12 contain the primer pair giving rise to the longer, 515 bp, internal positive control band in order to allow kit identification.

In the presence of a specific amplification the intensity of the control band often decreases.

<sup>3</sup>For several DRB alleles only partial second exon nucleotide sequences are available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. We assume that unknown sequences in the first hyperpolymorphic region of the second exon of DRB alleles are conserved within allelic groups and that unknown sequences of codons 87 to 92 are identical with the DRB1\*0101 consensus sequence.

<sup>4</sup>Due to the sharing of sequence motifs between DRB alleles non-DRB5 alleles will be amplified by primer mixes 1 to 3 and 15.

The DRB5\*0112 and DRB1\*0907 alleles will give rise to identical amplification patterns. These two alleles can be distinguished by e.g. the DR low resolution primer set.

<sup>5</sup>Primer mix 2 may give rise to less specific PCR product than the other DRB5 primer mixes.

<sup>6</sup>Specific PCR fragments shorter than 150 base pairs are less intense and not as sharp as longer specific bands.

<sup>7</sup>Primer mix 3 frequently gives rise to an extra band longer than the control band. This band should be disregarded in the interpretation of DRB5 SSP typings.

<sup>8</sup>Primer mix 8 may give rise to primer dimer formation.

<sup>9</sup>Primer mix 9. Specific PCR fragment of 175 bp in the DRB5\*0113 allele. Specific PCR fragment of 225 bp in the DRB5\*0104 allele.

<sup>1</sup>The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 430 base pairs, for most wells, or a band of 515 base pairs, for some wells.

Well number 1 contains the primer pair giving rise to the longer, 515 bp, internal positive control band in order to help in the correct orientation of the DRB5 subtyping.

In addition, wells number 2, 5 and 12 contain the primer pair giving rise to the longer, 515 bp, internal positive control band in order to allow kit identification.

<sup>2</sup>The codon, in the 2<sup>nd</sup> or 3<sup>rd</sup> exon, matching the specificity-determining 3'-end of the primer is given. Codon numbering as on the [www.ebi.ac.uk/imgt/hla](http://www.ebi.ac.uk/imgt/hla) web site. The sequence of the 3 terminal nucleotides of the primer is given. Empty spaces indicate codon boundaries.

<sup>3</sup>The codon, in the 2<sup>nd</sup> or 3<sup>rd</sup> exon, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Codon numbering as on the [www.ebi.ac.uk/imgt/hla](http://www.ebi.ac.uk/imgt/hla) web site. The sequence of the 3 terminal nucleotides of the primer is given. Empty spaces indicate codon boundaries.

<sup>4</sup>The DRB5\*0201 allele has been shown to be identical to DRB5\*0202.

<sup>5</sup>The DRB5\*0112 and DRB1\*0907 alleles will give rise to identical amplification patterns. These two alleles can be distinguished by e.g. the DR low resolution primer set.

<sup>6</sup>Primer mix 9. Specific PCR fragment of 175 bp in the DRB5\*0113 allele. Specific PCR fragment of 225 bp in the DRB5\*0104 allele.

The specificity of each primer solution of the kit has been tested against 48 well characterized IHWC cell line DNAs.

No DNAs carrying the alleles to be amplified by primer solutions 9, 10, 14, 15 and 16 were available. The specificities of the primers in primer solutions 9, 10 and 16 were tested by separately adding one additional 5'-primer, respectively one additional 3'-primer. In primer solutions 14 it was only possible to test the 5'-primers, the 3'-primers were not possible to test. In primer solution 15 it was only possible to test the 5'-primer and one of the 3'-primers, one 3'-primer was not possible to test. Additional 3'-primers in primer solutions 2 and 3 were tested by separately adding additional 5'-primers.

**Results:** No false positive or false negative amplifications were obtained.

**Date of approval:** 2009-May-25

**Quality Control, Supervisor**

**Lot No.: 36F****Lot-specific information**

## Declaration of Conformity

**Product name:** Olerup SSP® DRB5**Product number:** 101.123-24u/06u**Lot number:** 36F**Intended use:** DRB5 high resolution histocompatibility testing**Manufacturer:** Olerup SSP AB  
Hasselstigen 1  
SE-133 33 Saltsjöbaden, Sweden  
**Phone:** +46-8-717 88 27  
**Fax:** +46-8-717 88 18

We, *Olerup SSP AB*, hereby declare that this product, to which this Declaration of Conformity relates is in conformity with the following Standard(s) and other normative document(s) ISO 9001:2000 and ISO 13485:2003, following the provisions of the 98/79/EC Directive on *in vitro* diagnostic medical devices, Annex II List B, conformity assessed using Annex IV, as transposed into the national laws of the Member States of the European Union.

The Technical Documentation File is maintained at *Olerup SSP AB*, Hasselstigen 1, SE-133 33 Saltsjöbaden, Sweden.

The Authorized Representative located within the Community is: *Olerup SSP AB*.

Notified Body: Lloyd's Register Quality Assurance Limited, Hiramford, Middlemarch Office Village, Siskin Drive, Coventry CV3 4FJ, United Kingdom.
