Lot No.: 02N **Lot-specific information**

Olerup SSP® HLA-A low resolution

Product number:	**101.401-48/12 – including *Taq* polymerase** **101.401-48u/12u – without *Taq* polymerase**
Lot number:	**02N**
Expiry date:	**2014-April-01**
Number of tests:	**48 tests – Product No. 101.401-48/48u** **12 tests – Product No. 101.401-12/12u**
Number of wells per test:	**31 +1**
Storage - pre-aliquoted primers:	**dark at -20°C**
- PCR Master Mix:	**-20°C**
- Adhesive PCR seals	**RT**
- Product Insert	**RT**

This Product Description is only valid for Lot No. 02N.

CHANGES COMPARED TO THE PREVIOUS *OLERUP* SSP® HLA-A LOW RESOLUTION LOT

Eight wells have been added to the HLA-A low kit, wells **25 to 32**.

The Lot-specific information for HLA A low resolution including and without *Taq* polymerase is now described in one common Product Insert.

The **HLA-A low resolution** specificity and interpretation tables have been updated for the HLA-A alleles described since the previous *Olerup* SSP® HLA-A low resolution lot was made **(Lot No. 94M)**.

The primers of the wells detailed below have been exchanged, modified or added compared to the previous lot.

Well	5'-primer	3'-primer	rationale
1	Moved	Moved	Primer pair moved to well 26, for improved resolution of A*01 alleles.
2	Added	-	Increased yield of specific PCR product.
3	Moved	Moved	Primer pair moved to well 26, for improved resolution of A*03 alleles.
6	Modified	-	Increased yield of specific PCR product.
8	-	Added	Primer added for the A*25:15 allele.
9	Added	-	Primer added for the A*25:15 allele.

Lot No.: 02N **Lot-specific information**

12	Added	Added	Improved resolution of HLA-A*68 alleles.
13	-	Modified	Improved yield of specific PCR product.
15	Added	-	Primers added for the A*30:47 and 30:52 alleles.
24	Moved, added	Moved, added	Negative control moved to well 32, primer pair added for the A*66:12 allele
25	New	New	Improved resolution of the A19 group of alleles.
26	New	New	Primer pair from well 1, improved resolution of the A*43:01 allele.
27	New	New	Primer pair from well 1.
28	New	New	Improved resolution of A*03 alleles.
29	New	New	Improved resolution of A*26 alleles.
30	New	New	Improved resolution of A*66 alleles.
31	New	New	Improved resolution of A*34 alleles.
32	New	New	Negative control, from well 24.

Change in revision R01 compared to R00:
1. The HLA-A*68:13 allele is amplified by primer mix 4. This has been corrected in the specificity and interpretation tables.

Change in revision R02 compared to R01:
1. The interpretation table has been corrected to include the A*68:83 allele.

Change in revision R03 compared to R02:
1. A footnote has been added to the specificity table, stating that primer mix 9 may weakly amplify the A*34 alleles.

Change in revision R04 compared to R03:
1. The HLA-A*01:02 and 01:20 alleles are amplified by primer mix 25. This has been corrected in the Specificity and Interpretation Tables.

Changes in revision R05 compared to R04:
1. The HLA-A*03:01:03, 03:09, 03:23:01, 03:89, 03:108, 11:06, 11:18, 24:28, 24:89, 26:03:01-26:03:02, 26:06, 26:07:02, 26:21, 26:30, 30:13, 30:16, 30:44, 30:46, 68:05, 68:15, 68:20 and 68:30 alleles are weakly amplified by primer mix 2. This has been corrected in the Specificity and Interpretation Tables.
2. Primer mix 17 does not amplify the HLA-A*36:02 allele. This has been corrected in the Specificity and Interpretation Tables.

Change in revision R06 compared to R05:
1. In primer mix 5, the specific PCR product of 535 base pairs may be difficult to distinguish from the internal control band. A foot note has been added to the Specificity Table.

Lot No.: 02N **Lot-specific information**

Well **32** contains Negative Control primer pairs, that will amplify more than 95% of the *Olerup* SSP® HLA Class I, DRB, DQB1 and DPB1 amplicons as well as an amplicon generated by a positive control primer pair.

PCR product sizes range from 75 to 430 base pairs.
The PCR product generated by the control primer pair is 430 base pairs.

Length of PCR product	**105**	**200**	**105**	**80**	**75**	**80**

[1]The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon, matching the specificity-determining 3'-end of the primer is given. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

[2]The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon or the 2nd intron, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

Lot No.: 02N **Lot-specific information**

PRODUCT DESCRIPTION

HLA-A low resolution

CONTENT

The primer set contains 5'- and 3'-primers for grouping the HLA-A*01:01 to A*80:02 alleles into the corresponding serological groups A1 to A80.

PLATE LAYOUT

Each test consists of 32 PCR reactions in a 32 well PCR plate. This lot is manufactured using white plastic trays.

1	**2**	**3**	**4**	**5**	**6**	**7**	**8**
9	**10**	**11**	**12**	**13**	**14**	**15**	**16**
17	**18**	**19**	**20**	**21**	**22**	**23**	**24**
25	**26**	**27**	**28**	**29**	**30**	**31**	**32**

Wells 1 to 31 – HLA-A low resolution primers.
Well 32 – Negative Control.
The 32 well PCR plate is marked with 'HLA-A low' in silver/gray ink.
Well No. 1 is marked with the Lot No. '02N'.
A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.
The PCR plates are covered with a PCR-compatible foil.
Please note: When removing each 32 well PCR plate, make sure that the remaining plates stay covered. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

Only HLA-A alleles will be amplified by the 32 wells of the HLA-A low resolution primer set except that primer mix 6 will amplify the B*18:27 allele. Thus, the interpretation of HLA-A low resolution is only influenced by this HLA-B allele and not by other HLA Class I genes.

UNIQUELY IDENTIFIED ALLELES

All the HLA-A alleles, i.e. **A*01:01 to A*80:02**, recognized by the HLA Nomenclature Committee in July 2011[1] will be amplified by the primers in the HLA-A low resolution primer set. The HLA-A alleles will be grouped into their corresponding serological specificities[2].

[1]HLA-A, HLA-B and HLA-C alleles listed on the IMGT/HLA web page 2011-July-14, release 3.5.0, www.ebi.ac.uk/imgt/hla.
[2]The A*23:14 and the A*24:05 and 24:13:02 alleles will give rise to identical amplification patterns. These three alleles can be separated by the respective high resolution SSP primer sets.

Lot No.: 02N **Lot-specific information**

SPECIFICITY TABLE

HLA-A low resolution primer set

Specificities and sizes of the PCR products of the 31+1 primer mixes used for HLA-A low resolution SSP typing

Primer Mix	Size of spec. PCR product[1]	Size of control band[2]	HLA-A serology[3]	Amplified HLA-A alleles[4,5,6]
1[7,9]	120 bp, 145 bp	**800 bp**	A1, A36	*01:01:01:01-01:01:31, 01:01:33-01:04N, 01:06-01:33, 01:35-01:68, 01:70-01:101, 36:01-36:05

[1]Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of HLA-A low resolution SSP typings.
When the primers in a primer mix can give rise to specific PCR products of more than one length this is indicated if the size difference is 20 base pairs or more. Size differences shorter than 20 base pairs are not given. For high resolution SSP kits the respective lengths of the specific PCR product(s) of the alleles amplified by these primer mixes are given.
Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.
PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.
PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.
Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.
[2]The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 1070

base pairs, for most wells, or a band of 800 base pairs, for some wells.
Well number 1 contains the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to help in the correct orientation of the HLA-A low resolution typing.
In addition, wells number 2, 4 to 6, 8, 9, 12, 19 to 23, 26 and 29 contain the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to allow kit identification.
In the presence of a specific amplification the intensity of the control band often decreases.
[3]The serological reactivity of all HLA-A alleles is not known. In this table we use the expert-assigned serological grouping in Tissue Antigens (2009) 73:95-170 and the serological grouping of the sequence-defined allele.
[4]Nucleotide sequence information is available for only exons 2 and 3 of many HLA Class I alleles and for only exon 2 of many HLA Class II alleles and not for other exons or for the introns of these alleles. We assume that unknown sequences in these exons and in the introns are conserved within loci and within allelic groups.
[5]The A*23:14 and the A*24:05 and 24:13:02 alleles will give rise to identical amplification patterns. These three alleles can be separated by the respective high resolution SSP primer sets.
[6]Primer mix 6 will amplify the B*18:27 allele.
[7]Specific PCR fragments shorter than 125 base pairs have a lower intensity and are less sharp than longer PCR bands.
[8]The primer pairs in wells 2, 5, 7, 8, 11 and 15 will in many samples give rise to two or three HLA-specific PCR fragments.
[9]In primer mix 1, the positive control band may be slightly weaker than for other HLA-A low primer mixes.
[10]Primer mixes 15, 27 and 28 may yield less specific PCR product than the other primer mixes.
[11]Primer mixes 6, 15, 20 and 23 may have a tendency of primer dimer formation.
[12]Primer mixes 15 and 29 may have tendencies of unspecific amplifications.
[13]Primer mix 22 might faintly amplify most A*11 alleles.
[14]Primer mix 30 may generate a false positive band of about 500 base pairs. This band should be disregarded when interpreting HLA-A low resolution typings.
[15]Primer mix 9 may weakly amplify the A*34 alleles.
[16]In primer mix 5, the specific PCR product of 535 base pairs may be difficult to distinguish from the internal control band. The alleles giving rise to a product of this size are the following:
A*01:95, 23:09, 24:02:06, 24:02:27, 24:08, 24:24, 24:29 , 24:42, 24:67, 24:116, 24:137, 24:140, 24:145, 24:156, 24:171 and 32:13.
[17]Primer mix 32 contains a negative control, which will amplify more than 95% of HLA amplicons as well as the amplicons generated by control primer pairs. PCR product sizes range from 75 to 200 base pairs. The PCR product generated by the control primer pair is 430 base pairs.
'w', might be weakly amplified.

[1]The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 1070 base pairs, for most wells, or a band of 800 base pairs, for some wells.
Well number 1 contains the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to help in the correct orientation of the HLA-A low resolution SSP typing.
In addition, wells number 2, 4 to 6, 8, 9, 12, 19 to 23, 26 and 29 contain the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to allow kit identification.
[2]The nucleotide position, in the 1st, 2nd or 3rd exon or in the 2nd intron, matching the specificity-determining 3'-end of the primer is given. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.
[3]The nucleotide position, in the 2nd or 3rd exon, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

[4]The sequence of the A*0105N has been shown to be identical to A*01:04N.
The A*01:34N allele has been renamed to A* 01:01:38L.
The A*020116 allele has been renamed to A*02:134.
The A*020120 allele has been renamed to A*02:01:18.
The sequence of the A*0223 allele has been shown to be identical to A*02:22:01.
The sequence of the A*0298 allele has been shown to be identical to A*02:96.
The A*02:100 allele has never been assigned.
The A*1128 allele has been renamed to A*11:15:02.
The A*11:53 allele has been shown to be identical to corrected sequence of A*11:02:01.
The sequence of the A*2401 allele has been shown to be in error.
The sequence of the A*2412 allele has been shown to be identical to A*24:08.
The A*2416 allele has been renamed to A*31:08.
The A*2465 allele has been renamed to A*24:13:02.
The A*26:44 allele has been renamed to A*26:43:02.
The sequence of the A*3005 allele has been shown to be identical to A*30:04.
The A*3021 allele has been renamed to A*30:11:02.
The sequence of the A*31011 allele has been shown to be identical to A*31:01:02.

Lot No.: 02N **Lot-specific information**

The sequence of the A*3302 allele has been shown to be identical to A*33:03:01.

[5]The serological reactivity of all HLA-A alleles is not known. In this table we use the expert-assigned serological grouping in Tissue Antigens (2009) 73:95-170 and the serological grouping of the sequence-defined allele.

[6]The primer pairs in wells 2, 5, 7, 8, 11 and 15 will in many samples give rise to two or three HLA-specific PCR fragments.

[7]The A*23:14 and the A*24:05 and 24:13:02 alleles will give rise to identical amplification patterns. These four alleles can be separated by the respective high resolution SSP primer sets.

[8]Primer mix 32 contains a negative control, which will amplify more than 95% of HLA amplicons as well as the amplicons generated by control primer pairs. PCR product sizes range from 75 to 200 base pairs. The PCR product generated by the control primer pair is 430 base pairs.

'w', may be weakly amplified.

CERTIFICATE OF ANALYSIS

Olerup SSP® HLA-A low resolution

Product number: **101.401-48/12 – including *Taq* polymerase**
101.401-48u/12u – without *Taq* polymerase

Lot number: **02N**

Expiry date: **2014-April-01**

Number of tests: **48 tests – Product No. 101.401-48/48u**
12 tests – Product No. 101.401-12/12u

Number of wells per test: **31 + 1**

Well specifications:

12	2011-918-12	24	2011-918-24		

The specificity of each primer solution of the kit has been tested against 48 well characterized IHWC cell line DNAs.

Additional 5'- and 3'-primers in primer solutions 4, 5, 7, 8, 12, 14 to 17 , 20 to 23 and 26 were tested by separately adding 3'-primers, respectively 5'-primers.
One additional 5'-primer in primer solutions 1 and 10 was tested by separately adding one 3'-primer. Additional 3'-primers in primer solutions 6, 18, 19 and 27 were tested by separately adding one 5'-primer. One or two of the 5'-primers in primer solutions 2, 9 to 11, 15 and 29 were not possible to test, and in primer solutions 3, 8, 18 and 19 one 3'-primer was not possible to test.

The negative control primer pairs, **Production No. 2011-928-01**, can detect contamination with PCR products diluted 10^{-7}.

Lot No.: 02N **Lot-specific information**

Results: No false positive or false negative amplifications were obtained.

Date of approval: 2012-February-21

Declaration of Conformity

Product name: *Olerup* SSP® HLA-A low resolution
Product number: 101.401-48/48u, -12/12u
Lot number: 02N

Intended use: HLA-A low resolution histocompatibility testing

Manufacturer: *Olerup* SSP AB
Franzengatan 5
SE-112 51 Stockholm, Sweden
Phone: +46-8-717 88 27
Fax: +46-8-717 88 18

We, *Olerup* SSP AB, hereby declare that this product, to which this Declaration of Conformity relates is in conformity with the following Standard(s) and other normative document(s) ISO 9001:2008 and ISO 13485:2003, following the provisions of the 98/79/EC Directive on *in vitro* diagnostic medical devices, Annex II List B, conformity assessed using Annex IV, as transposed into the national laws of the Member States of the European Union.

The Technical Documentation File is maintained at *Olerup* SSP AB, Franzengatan 5, SE-112 51 Stockholm, Sweden.

Notified Body: Lloyd's Register Quality Assurance Limited, Hiramford, Middlemarch Office Village, Siskin Drive, Coventry CV3 4FJ, United Kingdom. (Notified Body number: 0088.)

Stockholm, Sweden
