Olerup SSP® HLA-B*73

Product number: 101.555-06 – including *Taq* polymerase

101.555-06u – without *Taq* polymerase

Lot number: 11R

Expiry date: 2015-February-01

Number of tests: 6 Number of wells per test: 3

Storage - pre-aliquoted primers: dark at -20°C

PCR Master Mix: -20°C
 Adhesive PCR seals
 Product Insert
 RT

This Product Description is only valid for Lot No. 11R.

Changes compared to the previous *OLERUP* SSP® HLA-B*73 Lot (52K)

The HLA-B*73 kit is updated for new alleles to enable separation of:

- Confirmed¹ alleles as listed in the IMGT/HLA database
- Polymorphisms in exons outside of the region encoding the peptide binding domain
- Null and Alternatively expressed alleles

The Lot-specific information for HLA-B*73 including and without *Taq* polymerase is now described in one common Product Insert.

The HLA-B*73 specificity and interpretation tables have been updated for the HLA-A alleles described since the previous *Olerup* SSP® HLA-B*73 lot was made **(Lot No. 52K)**.

The HLA-B*73 primer set is unchanged compared to the previous lot.

¹As described in section Uniquely Identified Alleles.

Visit <u>www.olerup-ssp.com</u> for "Instructions for Use" (IFU)

Lot No.: 11R Lot-specific information www.olerup-ssp.com

PRODUCT DESCRIPTION

HLA-B*73 SSP typing

CONTENT

The primer set contains 5'- and 3'-primers for identifying the B*73:01 to B*73:02 alleles.

PLATE LAYOUT

Each HLA-B*73 test consists of 3 PCR reactions in an 8 well cut PCR plate. Wells 4 to 8 are empty.

1	2	3	empty	empty	empty	empty	empty

The 8 well PCR plate is marked with 'B73' in silver/gray ink.

Well No. 1 is marked with the Lot No. '11R'.

A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.

The PCR plates are heat-sealed with a PCR-compatible foil.

Please note: When removing each 8 well PCR plate, make sure that the remaining plates stay sealed. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

Only HLA-B*73 alleles will be amplified by the HLA-B*73 typing kit, except that the B*27:75 allele will be amplified by primer mix 1. Thus, the interpretation of HLA-B*73 typings is only marginally influenced by other groups of HLA-B alleles or alleles of other HLA Class I loci.

UNIQUELY IDENTIFIED ALLELES

All the HLA-B*73, i.e. **B*73:01 to B*73:02**, recognized by the HLA Nomenclature Committee in July 2012¹ will be amplified by the primers in the HLA-B*73 SSP kit.

The HLA-B*73 kit enables separation of the confirmed HLA-B*73 alleles as listed in the IMGT/HLA database. An HLA allele is listed as confirmed by IMGT/HLA if it has been sequenced by more than a single laboratory or from multiple sources. Current allele confirmation status for HLA-B*73 alleles is listed below.

The HLA-B*73 kit also enables identification of polymorphisms in exons outside of the region encoding the peptide binding domain and of null and alternatively expressed alleles

¹HLA-B alleles listed on the IMGT/HLA web page 2012-July-12, release 3.9.0, www.ebi.ac.uk/imgt/hla.

Visit www.olerup-ssp.com for "Instructions for Use" (IFU)

Lot No.: 11R Lot-specific information www.olerup-ssp.com

ALLELE CONFIRMATION STATUS

Allele	Status ¹			
B*73:01	Confirmed			
B*73:02	Unconfirmed			

¹Allele status "confirmed" or "unconfirmed" as listed on the IMGT/HLA web page 2012-July-12, release 3.9.0, <u>www.ebi.ac.uk/imgt/hla</u>.

RESOLUTION IN HOMO- AND HETEROZYGOTES

The two HLA-B*73 alleles can be combined in 3 homozygous and heterozygous combinations. All these genotypes give rise to unique amplification patterns.

SPECIFICITY TABLE

HLA-B*73 SSP subtyping

Specificities and sizes of the PCR products of the 3 primer mixes used for HLA-B*73 SSP subtyping

Primer Mix	Size of spec. PCR product ¹	Size of control band ²	Amplified HLA- B*73 alleles	Other amplified HLA-B alleles ³
1	150 bp	800 bp	*73:01-73:02	*27:75
2	220 bp	1070 bp	*73:01	
3	220 bp	1070 bp	*73:02	

¹Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of HLA-B*73 SSP typings.

When the primers in a primer mix can give rise to specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits the respective lengths of the specific PCR product(s) of the alleles amplified by these primer mixes are given.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

²The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 1070 base pairs, for most wells, or a band of 800 base pairs, for some wells.

Well number 1 contains the primer pair giving rise to the shorter, 800 bp, internal positive control

In the presence of a specific amplification the intensity of the control band often decreases.

³Due to the sharing of sequence motifs between HLA-B alleles the B*27:75 allele will be amplified by primer mix 1.

CERTIFICATE OF ANALYSIS

Olerup SSP® HLA-B*73 SSP

Product number: 101.555-06 - including *Tag* polymerase

101.555-06u – without *Taq* polymerase

Lot number: 11R

Expiry date: 2015-February-01

Number of tests: Number of wells per test: 3

Well specifications:

Well No.	Production No.		
1	2010-770-01		
2	2010-770-02		
3	2010-770-03		

The specificity of each primer solution of the HLA-B*73 primer set has been tested against 48 well characterized IHWC cell line DNAs.

No DNAs carrying the alleles to be amplified by primer solution 3 were available. The specificities of the primers in primer solution 3 was tested by separately adding one additional 3'-primer, the 3'-primer could not be tested.

Results: No false positive or false negative amplifications were obtained.

Date of approval: 2012-August-23

Approved by:

August 2012

Rev. No.: 00
