Lot No.: 2E6 **Lot-specific information**

Olerup SSP® HLA-B*82

Product number:	**101.552-06 – including *Taq* polymerase** **101.552-06u –without *Taq* polymerase**
Lot number:	**2E6**
Expiry date:	**2019-02-01**
Number of tests:	**6**
Number of wells per test:	**5+1**
Storage - pre-aliquoted primers:	**dark at -20ºC**
- PCR Master Mix:	**-20ºC**
- Adhesive PCR seals	**RT**
- Product Insert	**RT**

This Product Description is only valid for Lot No. 2E6.

Complete product documentation consists of generic Instructions for Use (IFU), lot specific Product Insert, Worksheet and Certificate.

CHANGES COMPARED TO THE PREVIOUS *OLERUP* SSP® HLA-B*82 LOT (71Y).

The HLA-B*82 kit is updated for new alleles to enable separation of:

- Confirmed[1] alleles as listed in the IMGT/HLA database
- Polymorphisms in exons outside of the region encoding the peptide binding domain
- Null and Alternatively expressed alleles

[1]As described in section Uniquely Identified Alleles.

The HLA-B*82 specificity and interpretation tables have been updated for the HLA-B alleles described since the previous *Olerup* SSP® HLA-B*82 lot was made **(Lot No. 71Y)**. The kit design is based on IMGT/HLA database 3.24.0.

As of lot series V, the Specificity Table is included in the lot-specific Product Insert, and the Interpretation Table is included in the Worksheet.

101.552-06 – including *Taq* pol., IFU-01
101.552-06u – without *Taq* pol., IFU-02

Visit www.olerup-ssp.com for **"Instructions for Use" (IFU)**

Lot No.: 2E6 **Lot-specific information**

The primers of the wells detailed below have been exchanged, added or modified compared to the previous lot.

Well	5'-primer	3'-primer	rationale
3	-	Modified	3'-primer modified for increased yield of the B*82:02 allele.
4	Exchanged	Exchanged	Primer pair exchanged for the allelic resolution of B*82:01-82:02 alleles.

Well **6** contains Negative Control primer pairs, that will amplify more than 95% of the *Olerup* SSP® HLA Class I, DRB, DQB1, DPB1 and DQA1 amplicons as well as all the amplicons generated by the control primer pairs matching the human growth hormone gene.

HLA-specific PCR product sizes range from 75 to 200 base pairs.
The PCR product generated by the positive control primer pair is 430 base pairs.

Length of PCR product	**105**	**200**	**105**	**80**	**75**	**80**	**85**

[1]The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon, matching the specificity-determining 3'-end of the primer is given. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.
[2]The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2nd or 3rd exon or the 2nd intron, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide and codon numbering as on the www.ebi.ac.uk/imgt/hla web site. The sequence of the 3 terminal nucleotides of the primer is given.

PRODUCT DESCRIPTION

HLA-B*82 SSP typing

CONTENT

The primer set contains 5'- and 3'-primers for identifying the B*82:01 to B*82:03 alleles.

PLATE LAYOUT

Each HLA-B*82 test consists of 6 PCR reactions in an 8 well cut PCR plate. Wells 7 to 8 are empty.

1	2	3	4	5	NC	empty	empty

The 8 well PCR plate is marked with 'B82' in silver/gray ink.
Well No. 1 is marked with the Lot No. '2E6'.
Wells 1 to 5– HLA-B*82 high resolution primers.
Well 6 – Negative Control (NC).
A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.
The PCR plates are heat-sealed with a PCR-compatible foil.
Please note: When removing each 8 well PCR plate, make sure that the remaining plates stay sealed. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

Due to the sharing of sequence motifs between HLA-B alleles non-HLA-B*82 alleles will be amplified by primer mixes 1 and 3. In addition, a few HLA-C will be amplified by primer mix 3.
For further details see Specificity Table.

UNIQUELY IDENTIFIED ALLELES

All the HLA-B*82, i.e. **B*82:01 to B*82:03**, recognized by the HLA Nomenclature Committee in April 2016[1,2] will be amplified by the primers in the HLA-B*82 SSP kit.

The HLA-B*82 kit enables separation of the confirmed HLA-B*82 alleles as listed in the IMGT/HLA database. An HLA allele is listed as confirmed by IMGT/HLA if it has been sequenced by more than a single laboratory or from multiple sources. Current allele confirmation status for HLA-B*82 alleles is listed below.

The HLA-B*82 kit also enables identification of polymorphisms in exons outside of the region encoding the peptide binding domain and of null and alternatively expressed alleles

101.552-06 – including *Taq* pol., IFU-01
101.552-06u – without *Taq* pol., IFU-02

Visit www.olerup-ssp.com for **"Instructions for Use" (IFU)**

Lot No.: 2E6 **Lot-specific information**

The HLA-B*82 subtyping kit cannot distinguish the following silent mutations: the B*82:02:01 and 82:02:02 alleles.

[1]HLA-B alleles listed on the IMGT/HLA web page 2016-April-15, release 3.24.0, www.ebi.ac.uk/imgt/hla.
[2]Alleles that have been deleted from or renamed in the official WHO HLA Nomenclature up to and including the last IMGT/HLA database release can be retrieved from web page http://hla.alleles.org/alleles/deleted.html.

ALLELE CONFIRMATION STATUS

Allele	Status[1]
B*82:01	**Confirmed**
B*82:02:01	**Confirmed**
B*82:02:02	Unconfirmed
B*82:03	Unconfirmed

[1]Allele status "confirmed" or "unconfirmed" as listed on the IMGT/HLA web page 2016-April-15, release 3.24.0, www.ebi.ac.uk/imgt/hla.

RESOLUTION IN HOMO- AND HETEROZYGOTES

Results file with resolution in HLA-B*82 homo- and heterozygotes is available upon request.

101.552-06 – including *Taq* pol., IFU-01
101.552-06u – without *Taq* pol., IFU-02

SPECIFICITY TABLE

HLA-B*82 SSP subtyping

Specificities and sizes of the PCR products of the 5+1 primer mixes used for HLA-B*82 SSP subtyping

Primer Mix	Size of spec. PCR product[1]	Size of control band[2]	Amplified HLA-B*82 alleles[3]	Other amplified HLA Class I alleles[4]
1	195 bp	**800 bp**	*82:01-82:03	*44:10, 44:15, 44:18, 44:140, 45:01:01-45:01:02, 45:05-45:07, 45:11-45:18, 49:20, 50:02
2[5,6,7]	140 bp	**800 bp**	*82:01, 82:03	
3[5]	230 bp	1070 bp	*82:02:01-82:02:02	*15:06, 15:27:01-15:27:03, 15:84, 15:109, 15:195, 15:327, 15:344, **C*03:89, C*03:271, C*04:08, C*04:34, C*04:147, C*04:212, C*18:08**
4	210 bp	1070 bp	*82:01-82:02:02	
5	155 bp	1070 bp	*82:03	
6[6,8]			**Negative Control**	

[1]Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of HLA-B*82 SSP typings.
When the primers in a primer mix can give rise to HLA-specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits, the alleles listed are specified according to amplicon length.
Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.
PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.
PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.
Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherit feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

[2]The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 1070 or 800 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the shorter, 800 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases.

[3]For several HLA Class I alleles 1st and/or 4th exon(s) and beyond, as well as intron nucleotide sequences, are not available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. Assumption is made that unknown sequences in these regions are conserved within allelic groups.

[4]Due to the sharing of sequence motifs between HLA-B alleles non-HLA-B*82 alleles will be amplified by primer mixes 1 and 3. In addition, a few HLA-C alleles will be amplified by primer mix 3.

[5]Primer mixes 2 and 3 may have tendencies of unspecific amplifications.

[6]Primer mixes 2 and 6 may have a tendency to giving rise to primer oligomer formation.

101.552-06 – including *Taq* pol., IFU-01
101.552-06u – without *Taq* pol., IFU-02

Visit www.olerup-ssp.com for **"Instructions for Use" (IFU)**

Lot No.: 2E6 **Lot-specific information**

[7]Primer mix 2 may give rise to a lower yield of HLA-specific PCR product than the other B*82 primer mixes.

[8]Primer mix 6 contains a negative control, which will amplify more than 95% of HLA amplicons as well as the amplicons generated by the control primer pairs matching the human growth hormone gene. HLA-specific PCR product sizes range from 75 to 200 base pairs and the PCR product generated by the HGH positive control primer pair is 430 base pairs.

[1]The provided cell line HLA specificities are retrieved from the http://www.ihwg.org/hla web site. The specificity of an individual cell line may thus be subject to change.

[2]The specificity of each primer solution in the kit has been tested against 48 well characterized cell line DNAs and where applicable, additional cell line DNAs.

No DNAs carrying the alleles to be amplified by primer solution 5 was available. In primer solution 5, it was only possible to test the 5'-primer, the 3'-primer was not possible to test.

In addition, one of the 3'-primer in primer solution 3 was tested by adding an additional 5'-primer.
