Lot-specific information

## **Olerup SSP® HLA-C low resolution screening**

<b>Product number:</b>	101.603-24/12 – including <i>Taq</i> pol. 101.603-24u/12u – without <i>Taq</i> pol.
<b>Lot number:</b>	8G9
<b>Expiry date:</b>	2021-04-01
<b>Number of tests:</b>	24 tests – Product No. 101.603-24/24u 12 tests – Product No. 101.603-12/12u
<b>Number of wells per test:</b>	23 + 1
<b>Storage - pre-aliquoted primers:</b>	dark at -20°C
- PCR Master Mix:	-20°C
- Adhesive PCR seals	RT
- Product Insert	RT

**This Product Description is only valid for Lot No. 8G9.**

Complete product documentation consists of generic Instructions for Use (IFU), lot specific Product Insert, Worksheet and Certificate.

### **CHANGES COMPARED TO THE PREVIOUS OLERUP SSP® HLA-C LOW RESOLUTION SCREENING LOT (2G0)**

The **HLA-C low resolution Screening** specificity and interpretation tables have been updated for the HLA-C alleles described since the previous *Olerup SSP®* HLA-C low resolution Screening lot was made (**Lot No. 2G0**). The kit design is based on IMGT/HLA database 3.32.0.

The primers of the wells detailed below have been exchanged, modified or added compared to the previous lot.

<b>Well</b>	<b>5'-primer</b>	<b>3'-primer</b>	<b>rationale</b>
16	Added	-	5'-primer added for the C*14:96 allele.

Lot No.: **8G9**

Lot-specific information

Well **24** contains Negative Control primer pairs, that will amplify more than 95% of the *Olerup SSP*<sup>®</sup> HLA Class I, DRB, DQB1, DPB1 and DQA1 amplicons as well as all the amplicons generated by the control primer pairs matching the human growth hormone gene.

HLA-specific PCR product sizes range from 75 to 200 base pairs.

The PCR product generated by the positive control primer pair is 430 base pairs.

<sup>1</sup>The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2<sup>nd</sup> or 3<sup>rd</sup> exon, matching the specificity-determining 3'-end of the primer is given. Nucleotide and codon numbering as on the [www.ebi.ac.uk/imgt/hla](http://www.ebi.ac.uk/imgt/hla) web site. The sequence of the 3 terminal nucleotides of the primer is given.

<sup>2</sup>The nucleotide position for HLA class I genes and the codon for HLA class II genes, in the 2<sup>nd</sup> or 3<sup>rd</sup> exon or the 2<sup>nd</sup> intron, matching the specificity-determining 3'-end of the primer is given in the anti-sense direction. Nucleotide and codon numbering as on the [www.ebi.ac.uk/imgt/hla](http://www.ebi.ac.uk/imgt/hla) web site. The sequence of the 3 terminal nucleotides of the primer is given.

Lot No.: **8G9**

Lot-specific information

## PRODUCT DESCRIPTION

### HLA-C-low resolution screening SSP subtyping

#### CONTENT

The primer set contains 5'- and 3'-primers for grouping the HLA-C\*01:02 to C\*18:10 alleles into the groups C\*01:xx to C\*18:xx.

#### PLATE LAYOUT

Each test consists of 24 PCR reactions in a 24 well cut PCR plate.

1	2	3	4	5	6	7	8
9	10	11	12	13	14	15	16
17	18	19	20	21	22	23	NC

The 24 well cut PCR plate is marked with 'HLA-C low screening' in silver/gray ink. Well No. 1 is marked with the Lot No. '8G9'.

Wells 1 to 23 – HLA-C low resolution screening primers.

Well 24 – Negative Control.

A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded. The PCR plates are covered with a PCR-compatible foil.

**Please note:** When removing each 24 well PCR plate, make sure that the remaining plates stay sealed. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

#### INTERPRETATION

Due to the sharing of sequence motifs between HLA alleles non-HLA-C alleles will be amplified by some primer mixes. For further details see Specificity Table.

#### UNIQUELY IDENTIFIED ALLELES

All the HLA-C alleles, i.e. **C\*01:02 to C\*18:10**, recognized by the HLA Nomenclature Committee in April 2018<sup>1,2</sup> will be amplified by the primers in the HLA-C low resolution screening SSP kit<sup>3</sup>. The HLA-C alleles will be grouped into the C\*01:xx to C\*18:xx groups.

<sup>1</sup>HLA-C alleles listed on the IMGT/HLA web page 2018-April-16, release 3.32.0, [www.ebi.ac.uk/imgt/hla](http://www.ebi.ac.uk/imgt/hla).

<sup>2</sup>Alleles that have been deleted from or renamed in the official WHO HLA Nomenclature up to and including the last IMGT/HLA database release can be retrieved from web page <http://hla.alleles.org/alleles/deleted.html>.

<sup>3</sup>The following alleles give rise to identical amplification patterns with the HLA-C low screening resolution primer set. These alleles can be separated by the respective high resolution primer sets.

<b>24<sup>14</sup></b>	-	-	<b>Negative Control</b>

<sup>1</sup>Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of HLA-C low resolution SSP typings.

When the primers in a primer mix can give rise to HLA-specific PCR products of more than one length this is indicated if the size difference is more than 20 base pairs. Size differences of 20 base pairs or less are not given. For high resolution SSP kits, the alleles listed are specified according to amplicon length.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherent feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

<sup>2</sup>The internal positive control primer pairs amplify segments of the human growth hormone gene. The internal positive control bands are 1070 or 800 base pairs respectively, well distribution as outlined in the table. Well number 1 contains the shorter, 800 bp, internal positive control band. The well distribution of the internal controls can help in orientation of the kit on gel photo, as well as allow for kit identification. In the presence of a specific amplification the intensity of the control band often decreases.

<sup>3</sup>For several HLA Class I alleles 1<sup>st</sup> and/or 4<sup>th</sup> exon(s) and beyond, as well as intron nucleotide sequences, are not available. In these instances it is not known whether some of the primers of the SSP sets are completely matched with the target sequences or not. Assumption is made that unknown sequences in these regions are conserved within allelic groups.

<sup>4</sup>HLA-specific PCR products shorter than 125 base pairs have a lower intensity and are less sharp than longer PCR products.

<sup>5</sup>Primer mix 2 will for most C\*02 alleles give rise to two specific PCR fragments.

<sup>6</sup>Primer mix 4 will for most C\*03 alleles give rise to two specific PCR fragments.

<sup>7</sup>Primer mix 9 will for most C\*07 alleles give rise to two specific PCR fragments.

<sup>8</sup>Primer mix 10 will for most C\*08 alleles give rise to multiple specific PCR fragments.

<sup>9</sup>Primer mix 17 will for most C\*15 alleles give rise to two specific PCR fragments.

<sup>10</sup>Primer mixes 12 and 23 may have tendencies of unspecific amplifications.

<sup>11</sup>Primer mixes 2, 16 and 18 have a tendency to giving rise to primer oligomer formation.

<sup>12</sup>Primer mixes 3, 6, 10 and 16 may give rise to a lower yield of HLA-specific PCR product than the other HLA-C low Screening primer mixes.

<sup>13</sup>Primer mix 14 might faintly amplify most C\*01 and the C\*14 alleles.

<sup>14</sup>Primer mix 24 contains a negative control, which will amplify more than 95% of HLA amplicons as well as the amplicons generated by the control primer pairs matching the human growth hormone gene. HLA-specific PCR product sizes range from 75 to 200 base pairs and the PCR product generated by the HGH positive control primer pair is 430 base pairs.

‘w’, might be weakly amplified.

‘?’, nucleotide sequence of the primer matching region not known.

“Instructions for Use” (IFU)

**Lot No.: 8G9**

**Lot-specific information**

<sup>1</sup>The provided cell line HLA specificities are retrieved from the <http://www.ihwg.org/hla> web site. The specificity of an individual cell line may thus be subject to change.

<sup>2</sup>The specificity of each primer solution in the kit has been tested against 48 well characterized cell line DNAs and where applicable, additional cell line DNAs.

Additional 5'-primers and 3'-primers in primer solutions 1, 2, 4, 7, 14 to 16, 20 and 22 were tested by separately adding one, two or three additional 3'-primers, respectively one or two additional 5'-primers. Additional 3'-primers in primer solution 8, 11, 18 and 19 were tested by separately adding one or two additional 5'-primers. Additional 5'-primers in primer solutions 6 and 13 were tested by separately adding one additional 3'-primer. In primer solutions 1, 16 and 23 one or two 5'-primer was not possible to test, and in primer solutions 3, 7, 11 to 16 and 18 one or two 3'-primers were not possible to test.

101.603-24/12 – including *Taq* pol., IFU-01  
101.603-24u/12u – without *Taq* pol., IFU-02
