CHANGES COMPARED TO THE PREVIOUS *OLERUP SSP*[®] HLA-Cw*0409N LOT

The HLA-Cw*0409N specificity and interpretation tables has been updated for the HLA-C alleles described since the previous *Olerup SSP*[®] HLA-Cw*0409N lot (**Lot No. 19G**) was made.

The HLA-Cw*0409N primer set is unchanged compared to the previous lot.

PRODUCT DESCRIPTION

HLA-CW*0409N SSP subtyping

CONTENT

The primer set contains 5'- and 3'-primers for identifying the HLA-Cw*0409N allele.

PLATE LAYOUT

Each test consists of 2 PCR reactions in an 8 well PCR plate. Wells 3 to 8 are empty.

1	2	empty	empty	empty	empty	empty	empty
---	---	-------	-------	-------	-------	-------	-------

The 8 well cut PCR plate is marked with the Lot No. '87G' in silver/gray ink.

Well No. 1 is marked with the Lot No. '87G'.

A faint row of numbers is seen between wells 1 and 2 or wells 7 and 8 of the PCR trays. These stem from the manufacture of the trays, and should be disregarded.

The PCR plates are heat-sealed with a PCR-compatible foil.

Please note: When removing each 8 well PCR plate, make sure that the remaining plates stay sealed. Use a scalpel or a similar instrument to carefully cut the foil between the plates.

INTERPRETATION

The interpretation of HLA-Cw*0409N SSP subtypings will be influenced by the other Cw*04 alleles.

UNIQUELY IDENTIFIED ALLELES

The HLA-Cw*0409N allele will give rise to a unique amplification pattern by the primers in the HLA-Cw*0409N kit¹.

¹HLA-Cw alleles listed on the IMGT/HLA web page 2010-January-15, release 2.28.0, www.ebi.ac.uk/imgt/hla.

SPECIFICITY TABLE

HLA-Cw*0409N SSP subtyping

Specificities and sizes of the PCR products of the 2 primer mixes used for HLA-Cw*0409N SSP subtyping

Primer Mix	Size of spec. PCR product ¹	Size of control band ²	Amplified HLA-Cw alleles
1	205 bp	800 bp	0409N
2	255, 360 bp	1070 bp	04010101-040115, 0403-0420, 0423-0453

¹Alleles are assigned by the presence of specific PCR product(s). However, the sizes of the specific PCR products may be helpful in the interpretation of HLA-Cw*0409N SSP typings.

Nonspecific amplifications, i.e. a ladder or a smear of bands, may sometimes be seen. GC-rich primers have a higher tendency of giving rise to nonspecific amplifications than other primers.

PCR fragments longer than the control bands may sometimes be observed. Such bands should be disregarded and do not influence the interpretation of the SSP typings.

PCR fragments migrating faster than the control bands, but slower than a 400 bp fragment may be seen in some gel read-outs. Such bands can be disregarded and do not influence the interpretation of the SSP typings.

Some primers may give rise to primer oligomer artifacts. Sometimes this phenomenon is an inherent feature of the primer pair(s) of a primer mix. More often it is due to other factors such as too low amount of DNA in the PCR reactions, taking too long time in setting up the PCR reactions, working at elevated room temperature or using thermal cyclers that are not pre-heated.

²The internal positive control primer pairs amplify segments of the human growth hormone gene. The two different control primer pairs give rise to either an internal positive control band of 1070 base pairs, for most wells, or a band of 800 base pairs, for some wells.

Well number 1 contains the primer pair giving rise to the shorter, 800 bp, internal positive control band in order to help in the correct orientation of the HLA-Cw*0409N subtyping.
